

EDITORIAL

The impact of price increase of raw materials, particularly of paper, has started making dents on our meagre finance. Cost saving or austerity drive is the talk of the day and we don't intend to deviate from this.

Considerable thoughts have been spared on this and the consensus opinion is that we should endeavour to cut down the volume of the journal without sacrificing quantity. Necessary steps towards this direction have already been taken and the volume published recently bears testimony to this pattern as far as screening of materials for printing is concerned.

We are sure that all future subscribers of valued articles would bear in mind the hardship we are forced to go through and would endeavour to present concise articles in order to ensure that these do not fail in finding their way into the folds of our journal.

It was our desire to combine the second and third issue and bring out a quality journal. We are now happy to say that all our subscribers and well wishers have co-operated with us to achieve this objective.

INDUSTRIAL PROBLEM COLUMN

This service is offered to the readers of this Journal. If you have any Technical problem you may communicate the same to the Editor. The problem along with suggestions received will be published in due course.

BOOK REVIEW

Books, Journals etc. for review

should be sent to the Editor

of the Journal in duplicate.
