

CORRESPONDENCE

An Appreciation

(We are reproducing below extracts from a letter written by Ellis L. Yochelson of the Department of Paleobiology, National Museum of Natural History, Washington in appreciation of the "Glaessner Volume" Mem. No 20, brought out by the Society -Ed).

May 12, 1992

"Three days ago I received a copy of Geological Society of India, Memoir 20 'The World of Martin F. Glaessner.' From the dust jacket color photograph of him to the last paper, this is a marvellous tribute. I am especially pleased to receive the memoir".

"It was appropriate of GSI to elect him as a Honorary Fellow, as Prof. Glaessner was a world-class scientist, but it is even more gracious of the society to pay such a tribute to him. Reprinting two of his shorter works and the Cloud-Glaessner paper will make them more accessible; it is unfortunate that Prof. Cloud did not live to see this volume. His remarks and those of the others who commented on Prof. Glaessner's life and career are most interesting. The selection of papers which you have included bear on almost all aspects of his scientific efforts. It must have been a difficult job to find the right persons to prepare such stimulating papers."

Sincerely yours

ELLIS L. YOCHELSON

ANNOUNCEMENTS

INTERFACE, June 1992, 12 pp. Bulletin from NRSA DATA CENTRE is a special issue giving detailed information on the prices of all the products available for sale at NRSA DATA CENTRE, National Remote Sensing Agency, Balanagar, Hyderabad-500 007 together with Data request formats. All those interested may please contact NRSA at the address given above.

Geofluids '93, Torquay, England, 4th-7th May 1993. International Conference on Fluid Evolution, Migration and Interaction in Rocks. The conference aims to bring together professionals from the petroleum, minerals and associated industries dealing with factors common to oil and gas migration, production from hydrocarbon reservoirs, the origin and movement of mineralising fluids and ore genesis. It will promote cross-discipline versatility in geology, geophysics and geochemistry and provide an opportunity for an exchange of concepts, techniques and technology. The Conference will be of interest to personnel involved in exploration and production of oil or minerals and to academics and research groups working in these fields.
