Abstract: The palaeoproterozoic Lapland granulite belt was juxtaposed between Archaean and Proterozoic terrains in the NE part of the Fennoscandian Shield concurrently with the accretion of Svecofennian arc complexes at ~1.9 Ga. The belt consists of aluminous migmatitic metagreywackes. Abundant noritic to enderbitic magmas were intruded concordantly into the metasediments and were probably an important heat source for metamorphism, which took place during the crystallization of the magmas. This is supported by a structural and contact relations of metasediments and igneous rocks, and by the lack of progressive metamorphic reaction textures in the igneous rock series. The peak of metamorphism took place above the dehydration melting temperature of the biotite-sillimanite-plagioclase-quartz assemblage at 750-850°C and 5-8.5 kbar which lead to formation of a restitic palaeosome and peraluminous granitic melt in metapelites. Subsequently, the rocks were decompressed and cooled below the wet melting temperature of pelitic rocks (650°C) under the stability field of andalusite coexisting with potassium feldspar (2-3 kbar). Cooling was accompanied by the crystallization of the neosomes, often carrying aluminium-rich phases. Post-metamorphic duplexing of the LGB is clearly seen in the distribution of calculated PT conditions.

Geoanalytical Facilities on Payment Basis at WIHG, Dehra Dun

Wadia Institute of Himalayan Geology (WIHG), Dehra Dun (an autonomous research institution of the Department of Science and Technology, Government of India) provides high quality analytical services to research scholars, government agencies, universities, industries and individuals on **payment basis**. The in-house laboratories are equipped with instruments like W.D.XRFS, XRD, SEM, AAS, ICP-AES and ICP-MS. The following types of analytical services are available: Sample preparation, determination of major oxides, trace and rare earth elements, compound/mineral identification and microscopic studies. Sample may be rocks, soil, sludge and/or water/effluents. The rates of analytical services are available on the Institute's website: www.himgeology.com. For further details, please contact: Director, WIHG, 33 G.M.S. Road, Dehra Dun - 248 001, Uttaranchal. **Phone:** 0135-2625952, **Fax:** 0135-2625212; **Email:** director@wihg.res.in;
