ABSTRACT

A general account of the vegetation of the Chandrapur district in Maharashtra State is presented in the paper. Location, topography, geology and climate are briefly discussed. An enumeration of plants is added to give an idea of the flora of the district.

INTRODUCTION

A floristic account of the Chandrapur district of Maharashtra State is lacking. Haines (1916) has mentioned some plants from the Chandrapur district. A few more plants have, however, been reported by Tiwari (1954, 1955 & 1963); Tiwari et Maheshwari (1964) and Malhotra & Moorthy (1971).

In the present paper materials for a flora of Chandrapur district are presented. The work is being continued with a view to bring out an exhaustive flora of the district. The specimens are deposited in BSI under S. K. Malhotra (Senior author).

LOCATION, TOPOGRAPHY, GEOLOGY AND CLIMATE

Chandrapur district of Maharashtra State is situated at $78^{\circ}50'-81^{\circ}$ East longitude and $20^{\circ}50'-18^{\circ}40'$ North latitude.

The greater part of the area surveyed is undulating with hill ranges varying from elevation of about 150 m to 450 m above the surrounding plains. It is cut off by seasonal nallas and rivulets. The Wain-ganga river passes through the middle of the district touching Warsa, Armori and Garhchiroli and near Aheri it is joined by Dina river and the resultant being called Pranhita river near Sironcha which later joins the River Godavari. The area is bordered on the eastern side by Bastar district of Madhya Pradesh near Dechili. On the western side near Sironcha lies Adilabad, the district of Andhra Pradesh.

The main rocks are granite, quartz and quartzite. On the upper and steeper slopes of the hills, the rocks are generally exposed, resulting in denuded and shallow soils. Soil is deep and well suited to forest growth on the ridges and in the valleys etc.

The climate of the district is characterised by a hot summer, well distributed rainfall during the South-west monsoon season and general dryness except in the rainy season. The average annual rainfall in the district is 1420.2 mm. Maximum rainfall occurs in July. The cold season is from December to February. This is followed by hot season from March to May. The monsoon season is from June to September. October and November constitute the post monsoon season.

VEGETATION

The forest vegetation of the district is of mixed deciduous type. There are several dense forest reserves like Ikara, Porla, Bramhapuri, Kolsa, Taroba, Kanhargaon, Lakkarkote, Mulchera, Allapalli, Elgurtola, Jimalgatta, Koppela, Somanpalli etc. in the district.

The trees are often loaded with the epiphytes like *Vanda tassellata* and parasites like *Cassytha filiformis*; *Dendrophthoe falcata* and *Viscum articulatum* etc.

Bamboos and prickly thickets of canes are often met with in forest areas of Manekshagarh, Etapalli, Muramgaon etc.

The undergrowth in forest area is generally rich after the monsoon. In the deep interiors of the forests, the herbs, grasses and a few undershrubs like *Abelmoschus manihot*; *Abutilon indicum*; *Acalypha indica*; *Achyranthus aspera*; *Ageratum conyzoides*; *Alysicarpus vaginalis*; *Anmannia baccifera*; *A. multiflora*; *Andrographis paniculata*; *Blumea membranacea*; *Bothriochloa pertusa*; *Centotheca lappacea*; *Chrysopogon fulvus*; *Coldenia procumbens*; *Corchorus aestuans*; *Costus speciosus*; *Crotalaria hirsuta*; *C. hirta*; *C. pusilla*; *C. ramosissima*; *Curculigo orchioidea*; *Cyanotis cristata*; *Cymbopogon martinii*; *Cyperus iria*; *C. rotundus*; *Dactyloctenium aegyptium*; *Desmodium gangeticum*; *Eleusine indica*; *Hedyotis coerulea*; *Heteropogon contortus*; *Hybanthus enneaspermus*; *Indigofera linifolia*; *Lindernia ciliata*; *L. crustacea*; *Lepidagathis cristata*; *Lipocarpus chinensis*; *L. triceps*; *Mitrasacme alsinoides*; *Mollugo pentaphylla*; *Oplismenus compositus*; *Orthosiphon pallidus*; *Osbeckia zeylanicum*; *Pavonia zeylanica*; *Perotis indica*; *Phyla nodiflora*; *Rhynchosia aurea*; *R. minima*; *Sida cordata*; *Uraria picta*; *Urena lobata*; *Urgenia indica*; *Vernonia cinerea*; *Vetiveria zizanioides*; *Waltheria indica*; *Xanthium strumarium*; *Zornia gibbosa* etc. are frequently met with.
