

From Editor's Desk:

For the sixth year "Reason" is seeing the light of the day. Through all these years many a technical article has been published in "Reason" that has drawn accolades from all corners. It has always been the hallmark of the technical magazine of the college. Every year it brings in new ideas. Facts, when combined with ideas constitute the greatest force in the world. The world of science and technology always comes up with changes, and "Reason" plays its small but invaluable part in acquainting us with the changes. Somebody has rightly said, *"We must dare to think 'unthinkable' thoughts. We must learn to explore all the options and possibilities that confront us in a complex and rapidly changing world."*

This year a good number of articles has come from the students. All these articles are rich in information and knowledge. The articles truly speak of the high academic standards set in this institution. They are all about the state-of-the-art technology that revolves around us. Students in this college always participate in various activities other than their regular academic tasks. As the true torchbearers of this college, they often engage themselves in enriching their knowledge and skill, looking far beyond their scheduled curricula.

This issue of "Reason" may also boast of a wide range of the articles published. Persons with different academic backgrounds have thrown light on a broad spectrum of science and technology. Topics are not only well conceived, but also written in lucid language so that readers can find them enjoyable to read, apart from finding them wealthy in material.
