

From The Editor's Desk:

It is a matter of pride and pleasure that *Reason* is going to see the light of the day for the seventh consecutive year. Through all these years it has always been the mirror of the academic environment of Kalyani Government Engineering College in true sense. It is the beloved child of the family of the college. There has never been dearth of articles enriched with knowledge and depth. Science and technology have progressed in the last few years by leaps and bounds, and the world experiences newer dimensions in life styles, and, ironically, more and more complicated problems to face. Therefore, scientists and engineers are facing stiffer challenges to deal with and innovations and trouble-shooting are continuing side by side.

This year, once again, *Reason* has come up with a good number of articles on different facets of science and technology. Not only the members of the faculty but also the students of this college have contributed with some articles that ably reflect their keenness and sincerity in pursuing the realm of technology. There are some articles which are quite informative and some other being narration of personal experience as well. The articles are expected to draw attention from all sections of the people of this society.

Special thanks are due to all the authors who spent their valuable time despite their busy schedule. No words would suffice to acknowledge the help and contributions received from all members of Kalyani Government Engineering College, only a whole-hearted support from all corners could make it possible. Despite the best possible effort some possible errors might have crept in here and there. After all, "perfection is attained by slow degrees; it requires the hand of time." Remarks and comments from the readers are highly solicited. It would definitely help in improving the quality of *Reason* for all the years to come.
